

## User Story 1.2: Coupa/EAA Enrichment of Oracle AP Baseline

**As a Sourcing Associate, I want spend records enriched with Coupa/EAA detail (supplier, contract, category, invoice) when available, so I get richer context without losing coverage from Oracle-only transactions.**

### **Description:**

Layer Coupa and EAA detail on top of the Oracle AP baseline wherever a matching record exists, giving associates supplier, contract, category, and invoice context beyond what Oracle AP alone provides, without sacrificing the completeness the baseline already guarantees.

### **Narrative:**

Oracle AP ensures no spend is invisible, but it lacks the richness Sourcing Associates need to act - contract linkage, supplier detail, category context, and invoice-level detail largely live in Coupa and EAA. Rather than choosing between complete coverage and rich detail, this story ensures associates get both: full coverage from Oracle AP, enriched wherever Coupa or EAA has a corresponding record.

### **Business Value:**

Associates get actionable detail (supplier, contract, category) on the majority of spend where it's available, while still retaining visibility into the portion of spend that only exists in Oracle AP - avoiding a tradeoff between completeness and usability.

### **Acceptance Criteria:**

- Given a transaction exists in both Oracle AP and Coupa/EAA, when a user views that transaction, then supplier, contract, category, and invoice detail from Coupa/EAA is displayed alongside it
- Given a transaction exists only in Oracle AP, when a user views that transaction, then it still appears in the spend view without Coupa/EAA enrichment, rather than being excluded
- Enrichment fields are visually distinguishable from Oracle AP baseline fields, so users can tell which detail came from which source
  - Ex. A small tag or icon next to enriched fields reading "via Coupa" or "via EAA"
  - Ex. Baseline (Oracle AP-only) fields shown with no tag, or a different visual treatment

### **Out of Scope:**

- Defining the precedence/conflict rule when Oracle AP and Coupa/EAA disagree on the same field (covered in Story 1.3)

- Enrichment from data sources beyond Coupa and EAA (e.g. Supplier Hub) - not part of this story's scope
